

CM-IW100T

Control Mount for iPod touch® with audio output

iPort®, the inventor of the in-wall music system for iPod®, continues to innovate solutions for the custom installer with Apple® products. The CM-IW100T (CM100) allows an iPod touch® to be used for home automation control and music playback. Supporting a variety of downloadable applications for control of audio, video, lighting and climate as well as traditional touch screen applications such as weather and time, the CM100 may be installed in a vertical or horizontal manner, depending upon the desired use.

An iPod touch is securely mounted into a semi-permanent fixture, the CM100, and trimmed with a faceplate to provide in-wall access to the iPod touch screen. Music from a variety of internet sources may be played via the mounted iPod touch, turning the CM100 into a discreet in-room music source which can be easily connected to an amplifier and speakers for a local room music system. With the audio output routed to a multi-zone audio controller, music from the CM100 can be distributed.

Using a Wi-Fi connection through the mounted iPod touch, applications supported by iPod touch can be downloaded for integration with the control system that has been provided by the installer. A gentle tap on the multi-touch display or swipe and tap provides easy access to the range of applications available. Downloading of new applications and iTunes® content may be done with the iPod touch mounted in the CM100 via the provided Wi-Fi network.

The CM100 provides continuous charging for the mounted iPod touch over CAT5 via a power supply connection at its audio and power wall plate.

CM-IW100T Features:

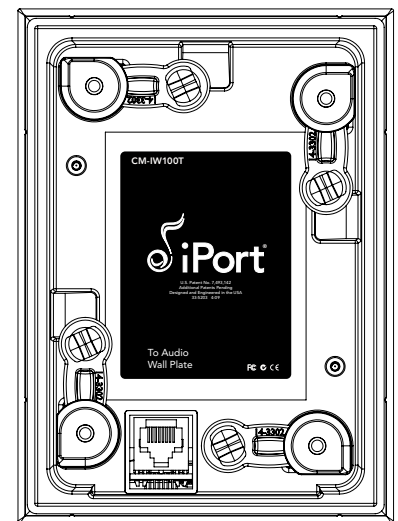

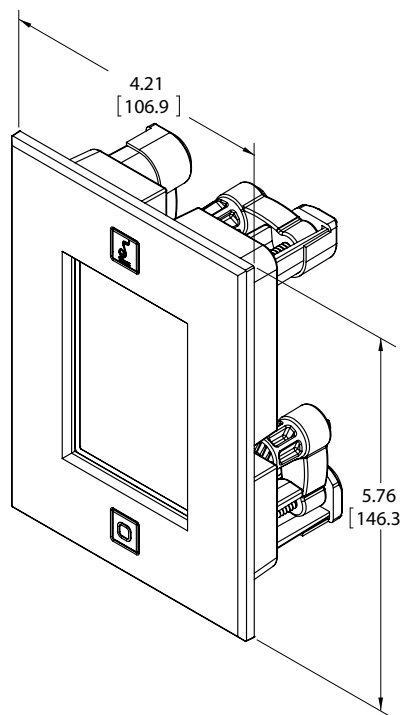

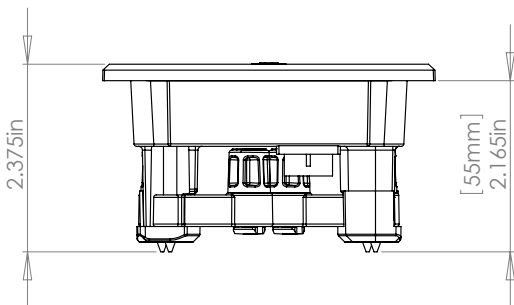

- Semi-permanent fixture for iPod touch in either vertical or horizontal orientation
- Charging
- Unbalanced audio output for distances up to 30 feet.

CM-IW100T Includes:

- Magnetic faceplate
- Mounting cradle assembly
- Connector and charging board with RJ-45 jack
- Audio wall plate
- Power supply

Compatibility:

- 2nd and 3rd generation iPod touch
